

Racing Oil

Essential Fatty Acid Feed Supplement For Horses

ENERGY

HIGH ENERGY BLEND OF ESSENTIAL OMEGA 3 & OMEGA 6 FATTY ACIDS, SPECIFICALLY BALANCED FOR HIGH PERFORMANCE HORSES

KEY INGREDIENTS per L:

Omega 3 (Linolenic Acid) 107mL, Omega 6 (Linolenic Acid) 426mL

Features

- ☐ Provides sufficient energy for performance, particularly for endurance (aerobic) work where the use of fats spares glycogen stored in muscle tissue so that it is available for intense anaerobic work such as sprinting, jumping, etc.
- ☐ Spares glycogen use, reducing the formation of lactic acid, thereby extending endurance and stamina, and delaying muscle fatigue.
- ☐ Highly palatable.

Benefits

- ☐ Reduces the volume of feed required and significantly improves the available energy for endurance (aerobic) performance in all disciplines.
- ☐ Well balanced oils provide 'cool' energy which do not excite horses as seen with high grain diets.
- ☐ Limits the heat of digestion, particularly important in warmer climates.

DIRECTIONS FOR USE/CONTRAINDICATIONS

Ranvet Racing Oil may be mixed through the feed or administered orally over the tongue as directed by a veterinary surgeon.

IMPORTANT NOTE: It is likely to take up to 4-6 weeks for horses to adapt fully to oil in the diet, so a gradual increase in the oil content of the diet from 30-50mL daily is advised. It must be considered that up to as much as 10% of the diet can be achieved in fat supplementation.

DOSAGE RATES:

Horses in training 30-150mL daily; Horses with metabolic disturbances (e.g. 'tying up') 150-300mL daily.

PACK SIZE:

5L, 20L & 205L
